ARC Request for Approval of Security Screen Doors
Addendum to ARC Minutes for July 13, 2013

The ARC requests that the Board of Directors approve these three styles of security door. These three are all "security screen doors." None of this type has been approved as yet by the Board.

Background: While over the last ten years Nepenthe has approved and made available to homeowners for use with their front doors a number of models of screen (window-screen type) doors, with and without glass, or with moveable glass, or of retracting, hideaway design, it has *not* as yet approved any model of what is referred to as a *security screen door* that consists of a somewhat decorative framework backed by a "fine-grid steel mesh screen" or an "expanded metal screen." These screens contain components which are substantially stronger than familiar, conventional window screens, being much stronger to provide more security against break-ins while still permitting ventilation. Several homeowners have requested these doors. (One, the Arcada, already has been applied for by a homeowner, approved and installed in June at 1539 University Ave.)

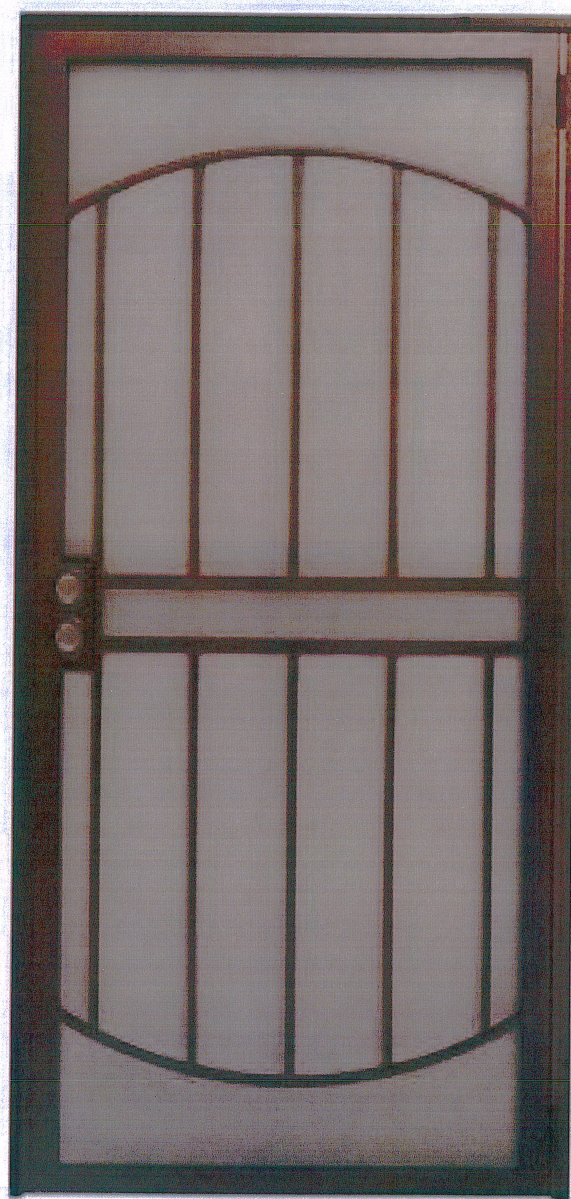

These three are manufactured by Unique Home Designs and are available, for example, at Home Depot stores. There are three designs selected, in the 36" by 80" standard size. None are also available in the over-height 90" size Nepenthe also uses, though:

1. **Cottage Rose**, only in the Black color finish
2. **Meridian**, only in the Copper (dark brown) color finish
3. **Arcada**, in either Copper (dark brown) or Silverado (dark bronze).
